THE KEY STATISTICS FOR CLOUD COMPUTING IN 2022

There's no question that the profile of cloud computing technologies has risen significantly over the past few years. The recent Covid pandemic and the accompanying need to facilitate effective remote work means that many organisations were swift to adopt a digital transformation that may otherwise not have been a priority. The latest statistics show that in 2022, cloud trends have continued to develop and evolve.

NUMBER OF ORGANISATIONS USING CLOUD TECHNOLOGY

Recent studies show that 90% of organisations now use some form of digital technology initiative¹, such as cloud computing applications. Indeed, in the North American region alone, the use of cloud technologies by organisations is now at 60%, a figure up five times from just five years previously¹.

SPENDING TRENDS

Digital transformation is certainly proving to be big business, with the total global spend on such projects set to reach \$1.8 trillion this year. This would represent an impressive CAGR of 16.7% since 2017¹.

COLLABORATION IS KEY

There's no question that one result of the recent pandemic is a cultural shift in working patterns. Rather than insisting on having employees in the office every day, it's estimated that 60% of organisations will make the move to hybrid working styles this year¹. And, of course, the cloud ensures that real-time, secure collaborative work can continue wherever your team are logging on.

WHAT THIS MEANS FOR RECRUITMENT

Today's leadership is therefore looking to recruit the finest tech talent to help consolidate their gains made through a digital transformation. 69% of employers now aim to hire talent with data science skills¹, and those with the right knowledge and experience are enjoying unprecedented career opportunities as a result.

SO, IF YOU HOPE TO ATTRACT AND SECURE THE FINEST TECH TALENT FOR YOUR COMPANY, IT MAKES SENSE TO PARTNER WITH THE EXPERTS IN THE CHALLENGING FIELD OF TECH RECRUITMENT.
