

## THE CHALLENGE

Client needed to complete an Azure to AWS migration and were falling behind on project deadlines. Costs were spiralling and they had not been able to attract and retain the technical talent required to complete the work.

## THE SOLUTION

Worked with the Programme Director to understand the technical requirements and built them a talent pool of candidates in 72 hours. Worked with all parties to draw up SOW's and agree timescales for project milestones. Assessed all requirements for IR35 and drew up SDS for agreements.

## SUMMARY

Team of 6 onboarded and delivery started within 10 working days. The customer now has a clear, defined timeline of the project scope and is now looking at engaging Regal for future projects with other parts of the organisation.

REGAL CLOUD

## CASE STUDY

Azure to AWS migration

DELIVERED IN 10 DAYS

LEGAL TEAM SAVED

**TIME AND MONEY**

OUTSOURCING ALL  
IR35 ASSESSMENTS

*"We have worked with Regal in the past to build out perm teams and have always been impressed with the speed and efficiency of their talent solutions. We engaged them on this project as we were not getting any clear answers from existing suppliers and costs were starting to spiral. They quickly spoke to the business and understood exactly who and what we needed to get the project completed. Moving forward they will be the first call we make."*
